

Results of 40 litre Samples

As a way of evaluating FTA's cooking oil filtration larger operators have sent in 40 litre samples which were heated to 180C and ran through the FF 3000 as a way to see what can be achieved in moving forward to install larger permanent systems.

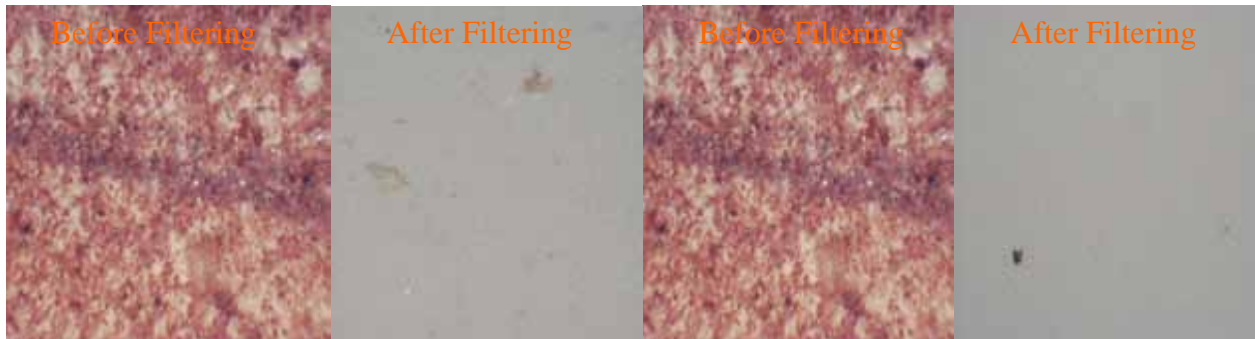

Kelso Cotton Seed Oil

Bathurst Tallow Results

Above are 0.8 micron filter patches done before and after running the samples through the FF 3000

Above are pictures of the oil taken under a microscope as you can see large deposits of contamination are visible on the slides before filtration and after filtration there has been large amounts
