

Hidden Oil Fields

With countries like ...
the USA currently holding 2.5% of the world's know reserves, *
the USA currently producing 8.5% of the world's petroleum, *
the USA currently using 24.9% of the world's petroleum ... *

...it could not be more timely to embrace FTA's technology.

* source: 54th edition of BP statistical review of world energy 2005

With savings in:

Diesel Fuel of 3% to 7%+

Use 930/970 gallons rather than 1,000 gallons

Engine Oils of 50% to 75%

Use 250/500 gallons rather than 1,000 gallons

Hydraulic Oils of 80% to 98%

Use 20/200 gallons rather than 1,000 gallons

If enough companies, organisations and individuals fitted FTA Filter Systems to their engines and machinery, the dramatic savings for our petroleum reserves would be equal to drilling and discovering a new oil field !

As an extra benefit, engines and machinery operate more efficiently, enjoy extended component life, increased up time, lower costs, less dependency on the supply of petroleum products, far lower waste streams and lower engine emissions.
